

The Motions of the Earth

Answer Key

1) Answer: B

Explanation: The Earth's axis is tilted about 23.5 degrees.

2) Answer: C

Explanation: Rotation is the movement of the Earth around its axis. We have day and night due to Earth's rotation.

3) Answer: A

Explanation: During an equinox, the length of the day and the night are equal.

4) Answer: C

Explanation: Rotation is the movement of the Earth around its axis while revolution is the movement of the Earth around its orbit.

5) Answer: A

Explanation: Precession is the slowest movement of the Earth which refers to the "wobbling" of the Earth as it rotates on its axis.
