

Depositional Environments, Landforms, and Waterforms

Answer Key

1) Answer: C

Explanation: Rivers are bodies of water that originate from high elevation (such as mountains or hills) and flow down to lower elevation (such as plains, mountain slopes, etc.).

2) Answer: B

Explanation: Erosion is the process of weathering and transporting earth materials. The transport of these materials can be due to various factors such as water, wind, humans, etc.

3) Answer: D

Explanation: Deep Marine Environments are characterized as low energy environments attributed to the inability of sunlight to reach it.

4) Answer: B

Explanation: Deltaic is a transitional environment where the river flows into the sea and the freshwater mixes with seawater

5) Answer: A

Explanation: A continental slope is a marine environment between the shallow continental shelf and the deep ocean basin
