

Community Structure and Dynamics

Practice Questions

Directions: Choose the letter of the correct answer.

1. The interaction where two populations from different species benefit from each other?
 - a. Predation
 - b. Mutualism
 - c. Herbivory
 - d. Parasitism
2. Producers are at the base of the food chain while consumers feed on them and are fed on by other consumers. This describes which property of the community?
 - a. Competition
 - b. Species diversity
 - c. Trophic structure
 - d. Herbivory
3. Food isn't just exclusive to one species. This interconnected chain where food is fed upon by different organisms describes which structure?
 - a. Food pyramid
 - b. Food web
 - c. Food domino
 - d. Trophic structure
4. An organism uses both biotic and abiotic resources in its environment. The entirety of it forms the _____ of the organism?
 - a. Ecological succession
 - b. Ecological destruction
 - c. Population ecology
 - d. Ecological niche
5. Two or more species fighting for the same resources lead to which interaction?
 - a. Interspecific competition
 - b. Ecological succession

Community Structure and Dynamics

Practice Questions

- c. Interdependence
 - d. Trophic structure
6. A community is made of a diverse array of species which are also defined by which of the following factor?
- a. Species diversity
 - b. Species richness
 - c. Keystone species
 - d. Ecological succession
7. When a nonnative species is introduced to an area and becomes dominant over the native species, they are considered:
- a. Invader species
 - b. Invading species
 - c. Invasive species
 - d. Invaded species
